CS 396 – Introduction to Web Development

Name: Amritanshu Ray
Student ID: 3377950

HW2

I had to add adequate and descriptive alternative texts to all contents and media in order for it to be better accessible.

Also added null alt texts for contents which did not require any descriptions.

Not all accessibility problems are solvable at the moment, due to the issue described in the question (context)

This might be solvable in the near future however, given the advancements in computer vision and deep learning software which will eventually be able to extract context from all media.

While it is still usable if necessary, but it's definitely a big ask.

It is somewhat usable, owing to the descriptions of the images and other content. A user will be able to somewhat derive the context of posts and also be able to see who posted what, when, and how many reactions, comments it received.
